ARCHITECTURE & DESIGN

WHAT MAKES A GREAT ARCHITECT? Part designer, part engineer, part visionary, the phenomenal architect must be able to listen and interpret his or her clients' wishes, think realistically (and optimistically), and achieve a vision that stands out as an aesthetic treasure. A great architect is conscious of the environment, the weather, the natural light, the views. A great architect designs buildings that make their clients' lives not only more functional, but more meaningful and beautiful. We are fortunate to have so many talented architects in the local community, architects regularly receiving prestigious awards and national recognition for their residential and commercial work. Architects who, in our opinion, are truly *great* at what they do.

OUR SPECIALTY:

We provide the full spectrum of architecture and interior design services for residential clients—from refining ideas to drawing final plans to selecting finishes and furnishings. Whether a project is new construction or a renovation, historic or modern, our designs blend elements of timeless residential architecture with modern conveniences. We pride ourselves on getting everything right, down to the smallest detail.

OUR PHILOSOPHY:

We help clients understand their dreams, define the program for their projects, and create designs that exceed their expectations. During every step of the design process, our aim is to meet our clients' needs with the highest level of service and quality.

WE BELIEVE EVERY HOME...

speaks a language of its own. We begin every project by listening to the house, allowing its original architecture to guide us while we incorporate the contemporary amenities our clients desire—larger kitchens with ample work space, laundry rooms, master suites, whatever makes the house more livable for them. Our designs for new construction incorporate our clients' lifestyles and sensibilities in a range of styles and materials.

"There's nothing greener than reusing an old house, and nothing more sustainable than fine design and materials made to last another 100 years."

— DAVID HEIDE, DAVID HEIDE DESIGN STUDIO
